AImpetus Website Content (v1)

Nov 12, 2026 · @Deepak

This is the copy for every page of the launch site, in page order and ready to paste. It follows the agreed brand foundation: data and digital services with AI at the core, the tagline "AI in the engine room.", and copy written for buyers, with NHS and public-sector experience as proof.

Conventions

- **H1, H2, H3** mark heading levels. Use one H1 per page.
- **[Button: …]** is a button and **[Link: …]** is a text link, with the destination page in brackets.
- **SEO title** (under 60 characters) and **Meta description** (under 155 characters) sit at the top of each page.
- **[Placeholder: …]** marks something to fill in before go-live. All of them are listed in the last section.
- Nothing here claims AImpetus clients, partners, framework places or accreditations. Founder experience is always described as the founders' own.

Developer brief: build requirements

This section is for whoever builds the site. Use the copy in this document exactly as written, and the brand kit in the AImpetus Brand folder.

Scope

- **Pages:** Home, Services overview, four service pages (Data and platforms, AI to benefit, Digital transformation, Delivery assurance), How we work, About us, Insights, Contact, Privacy notice, Cookie notice, Accessibility statement.
- **Not in scope at launch:** case studies, blog CMS beyond simple article pages, client login, analytics.
- **Domain:** aimpetus.ai, served over HTTPS, with www redirecting to the bare domain (or the other way round, consistently).

Must-haves

Requirement	What "done" looks like
Responsive	Works from 320 px phone width to large desktop. Navigation collapses to an accessible menu on small screens. No sideways scrolling.
Accessible (WCAG 2.2 AA)	Semantic HTML, one H1 per page, logical heading order, keyboard-only navigation with visible focus, skip link, alt text on meaningful images, labelled form fields with clear error messages, colour contrast at AA, touch targets at least 24 × 24 px, works at 400% zoom, respects reduced-motion settings.
Favicon and icons	favicon.ico (16/32/48), apple-touch-icon-180.png and the 192/512 PNGs, all from the brand kit icon folder.
Page titles and descriptions	Each page uses the SEO title and meta description given in this document. Add Open Graph and social sharing tags using the LinkedIn banner image.
Working contact form	Fields as on the Contact page. Sends to contact@aimpetus.ai, shows the confirmation message, includes the privacy notice link, and has spam protection that doesn't block disabled users (for example a hidden honeypot field or an accessible CAPTCHA).
Booking link	"Choose a time" opens the booking tool once chosen (placeholder for now).
Legal pages	Privacy, Cookie and Accessibility pages from the legal pages document, linked in the footer on every page.
Cookies	Strictly necessary cookies only at launch. No analytics or tracking without a consent banner.
Performance	Pages load quickly on mobile: optimised images, no heavy animation or autoplay video, fonts loaded efficiently.
Search	sitemap.xml, robots.txt and clean URLs (for example /services/data-and-platforms).

Brand

- **Logo:** use the SVG files from the brand kit (primary on light, reversed on dark). Never retype the logo as live text.
- **Colours:** Ink #0E2A2F, Teal #0F766E, Mint #5EEAD4 (on dark only), Amber #F59E0B (graphics only, never text on white), Paper #F7F7F4, secondary text #4A5A5D.
- **Fonts:** Space Grotesk Bold for headings, Inter for body text (both free Google Fonts).
- **"AI" in headings:** in Space Grotesk the capital I looks like a lowercase l, so "AI" can read as "Al". Wherever "AI" appears in a heading, give the I small serifs to match the logo, or set those two letters in a font with a serifed I. Check every heading that contains "AI".
- **Imagery:** no stock photos of robots, glowing brains or server rooms. Use the chevron motif, simple diagrams and, later, real photos of the founders.

Before launch

- [ ] All placeholders in this document and the legal pages are filled in or removed.
- [ ] Contact form tested end to end, including the confirmation message and the email arriving.
- [ ] Accessibility checked with an automated tool plus a manual keyboard and screen reader pass, with results recorded in the accessibility statement.
- [ ] Every page checked on a phone, a tablet and a desktop browser.
- [ ] Both founders have read every page.

Global elements

These appear on every page.

SEO defaults

- Site name: AImpetus
- Default SEO title: AImpetus | Data, digital and AI services
- Default meta description: Senior-led data, digital and AI services, with deep roots in the NHS and public sector. Data platforms, AI pilots that prove their benefit, digital transformation and delivery assurance.

Home page

- **SEO title:** AImpetus | Data, digital and AI for public services
- **Meta description:** Better digital services, with AI in the engine room. Senior-led data, digital and AI delivery, with deep roots in the NHS and public sector.

1. Hero

- Eyebrow: Data, digital and AI services
- **H1:** Better digital services, with AI in the engine room.
- Supporting line: We build the data platforms, digital services and governance that let AI work safely in live services. Senior-led, with 60 years of combined experience and deep roots in the NHS and public sector.
- [Button: Book a 30-minute conversation] → Contact
- [Link: See our services] → Services

2. The problem we solve

H2: AI is easy to pilot. Hard to run.

Most organisations have tried AI. Far fewer have it working in a live service. The usual blockers aren't the AI itself. They're scattered data, ageing platforms, unclear governance and programmes stretched thin. We fix the groundwork, so AI and digital change can hold up in the real world.

3. Why AImpetus

H2: A new company. A proven team.

1. **Senior people, start to finish.** Two founders with 60 years of combined experience. The people who scope your work lead its delivery.

2. **We know how national health programmes work.** More than a decade delivering NHS England and NHS Improvement data, cloud and digital programmes.
3. **Data and digital first, so AI holds up.** We build the platforms, data and controls AI needs, then test use cases against real benefits.
4. **Delivery and commercial sense together.** Experience of running a UK technology services business and large NHS delivery portfolios. Realistic plans, clear contracts, no surprises.
5. **Easy to work with.** Small and partner-friendly. We fit your teams and standards, and leave knowledge behind.

4. What we do

H2: Four services, one aim: services that work better.

Card	Line	Link
Data and platforms	Reliable, governed data that services and AI can depend on.	[Link: Data and platforms]
AI to benefit	Choose the right use cases, test them safely and prove the benefit before you scale.	[Link: AI to benefit]
Digital transformation	Redesign services and processes, modernise platforms and automate the routine.	[Link: Digital transformation]
Delivery assurance	Steady programmes, clear governance and an honest view of risk.	[Link: Delivery assurance]

5. How we work (summary)

H2: Start small. Prove it. Then scale.

1. **Understand** – we start with your service, your data and the outcome you need.
2. **Prove** – we test the idea quickly, against measures agreed up front.
3. **Scale or stop** – we scale what works, stop what doesn't, and leave your team able to run it.

[Link: How we work] → How we work

6. Founders

H2: Led by the people who do the work

- **Prahlad Koti**, Co-founder and Managing Director – former UK Managing Director of Mastek, with more than 30 years in technology services.
- **Deepak Thaper**, Co-founder and Delivery & Technology Director – nearly 30 years in technology delivery, including more than a decade on NHS national programmes.

[Link: Meet the founders] → About us

7. Closing call to action

H2: Got a data, AI or digital challenge?

Tell us what you're working on. In 30 minutes we'll give you an honest view of where to start, even if that isn't with us.

[Button: Book a 30-minute conversation] → Contact

Services overview page

- **SEO title:** Services | AImpetus
- **Meta description:** Data and platforms, AI to benefit, digital transformation and delivery assurance for public-sector and other organisations.

H1: Services built around the outcome, not the technology

We help public-sector and other organisations improve services with data, digital and AI. Each service can stand alone or work with the others, and each starts with the problem you need to solve.

H2: How our services fit together

Good data makes digital change possible. Good digital services give AI somewhere useful to work. Strong delivery assurance keeps all of it on track.

Data and platforms

For when your data is scattered, your platforms are ageing or being merged, and AI can't use what you have. [Link: Explore data and platforms]

AI to benefit

For when there's pressure to use AI, but no clear priorities, and pilots that never reach live services. [Link: Explore AI to benefit]

Digital transformation

For when services and processes were built for another era, organisations are merging, and you need to do more with less. [Link: Explore digital transformation]

Delivery assurance

For when a programme is running late, accountability is unclear, or you need an independent view of risk. [Link: Explore delivery assurance]

H2: Not sure where to start?

Most conversations begin with a problem, not a service. Tell us yours.

[Button: Book a 30-minute conversation] → Contact

Service page: Data and platforms

- **SEO title:** Data engineering and platforms | AImpetus
- **Meta description:** Data engineering, platform engineering and architecture for public-sector and other organisations. Reliable, governed data that services and AI can depend on.

H1: Data you can rely on, platforms that last

Every digital service and every AI use case depends on data that's accurate, connected and well governed. We help you get there, whether you're modernising an ageing platform, bringing organisations together or preparing for AI.

H2: Sound familiar?

- The same data lives in several places, and nobody agrees which version is right.
- Your platforms are expensive to run and hard to change.
- Teams are being merged, and so are their systems.
- AI ideas stall because the data isn't ready.

H2: What we do

- **Data engineering:** pipelines, integration and data quality, built to be maintained by your team.
- **Platform engineering:** cloud data platforms that are secure, scalable and cost-aware.
- **Solution and data architecture:** designs that fit your standards, your security needs and your future plans.
- **Platform consolidation:** moving and merging platforms without losing service continuity.

- **Data governance:** clear ownership, information governance and controls that make data safe to use.

H2: What you get

- One trusted view of the data that matters.
- Platforms that cost less to run and are easier to change.
- Data that's ready for analytics and AI.
- A team that can run and improve what we build.

H2: Where our experience comes from

Our founders have led data warehousing and analytics work for NHS Improvement. They've also run NHS England programmes on modern data platforms such as Azure Synapse and Palantir Foundry.

[Button: Talk to us about your data] → Contact

Service page: AI to benefit

- **SEO title:** AI use cases, pilots and benefits | AImpetus
- **Meta description:** Choose the right AI use cases, test them safely and prove the benefit before you scale. Practical, well-governed AI for public-sector and other organisations.

H1: AI that earns its place in your service

The question isn't whether to use AI. It's where AI will genuinely improve a service, and how to prove it before you commit. We help you choose well, test safely and make a clear decision: scale it or stop it.

H2: Sound familiar?

- There's pressure to "do something with AI", but no shared view of where it would help most.
- Pilots look promising, then stall before they reach a live service.
- Nobody is sure how to measure whether AI is actually helping.
- Governance, safety and information governance questions slow everything down.

H2: What we do

- **Use-case discovery:** we work with your teams to find where AI can make a real difference, and rank ideas by value and feasibility.
- **Pilots and proofs of concept:** focused tests with success measures agreed before we start.

- **Benefits tracking:** clear measures of time, cost, quality or experience, so decisions rest on evidence.
- **AI governance:** proportionate controls for safety, transparency, security and information governance.
- **Scale-up planning:** what it will take to run AI in a live service, including data, people and running costs.

H2: What you get

- A short list of AI use cases worth pursuing.
- Evidence of benefit, not just a demo.
- A clear scale-or-stop decision for each pilot.
- Governance your senior leaders and assurance teams can stand behind.

H2: Where our experience comes from

Our founders have led enterprise AI and data delivery with AI-native organisations and start-ups. They also hold certifications in AI security and governance.

[Button: Talk to us about AI] → Contact

Service page: Digital transformation

- **SEO title:** Digital transformation | AImpetus
- **Meta description:** Service and process redesign, cloud modernisation and automation for public-sector and other organisations. Simpler services that cost less to run.

H1: Simpler services, built for how people work now

Digital transformation isn't about new technology for its own sake. It's about services that are easier to use, cheaper to run and ready for what comes next, including AI. We help you redesign the service, modernise what sits underneath and deliver the change step by step.

H2: Sound familiar?

- Services and processes were designed for another era, and it shows.
- Organisations are merging, and so are their ways of working.
- Staff spend too long on manual, repetitive tasks.
- Older systems are costly to keep running and hard to change.

H2: What we do

- **Service and process redesign:** we start with users and staff, and design out the friction.
- **Cloud modernisation:** moving and modernising applications so they're secure, resilient and cost-aware.
- **Automation:** removing routine manual work, from simple workflow automation to robotic process automation.
- **Digital delivery:** agile delivery from discovery to live, in line with public-sector service standards.
- **Change support:** helping teams adopt new ways of working, so the benefits last.

H2: What you get

- Services that are simpler for users and staff.
- Lower running costs and less technical debt.
- More staff time for the work that matters.
- Foundations that are ready for data and AI.

H2: Where our experience comes from

Our founders have led large digital transformation, cloud migration and automation programmes for NHS England and NHS Improvement.

[Button: Talk to us about transformation] → Contact

Service page: Delivery assurance

- **SEO title:** Delivery assurance and governance | AImpetus
- **Meta description:** Independent delivery assurance, governance and programme leadership for national health and public-sector data, digital and AI programmes.

H1: Confidence that your programme will deliver

Data, digital and AI programmes rarely fail because of the technology. They struggle when governance is unclear, risks go unspoken and teams are stretched. We bring experienced, independent leadership that keeps delivery on track and gives senior owners an honest view.

H2: Sound familiar?

- The programme is behind, and nobody is quite sure why.
- Accountability is blurred between teams, suppliers and boards.
- Reports say green, but the people doing the work say otherwise.
- A major decision or approval is coming, and you want an independent view first.

H2: What we do

- **Delivery health checks:** a quick, independent review of where a programme really stands, with practical recommendations.
- **Delivery governance:** clear roles, decision-making and reporting that work for boards and delivery teams alike.
- **Independent assurance:** ongoing support through key stages and approvals.
- **Programme and project leadership:** experienced leaders who can steady, restart or run delivery.
- **Agile and hybrid delivery:** ways of working that fit the programme, using Scrum, Kanban or hybrid approaches.

H2: What you get

- An honest picture of progress and risk.
- Governance that speeds decisions up rather than slowing them down.
- A programme back on a realistic plan.
- Senior owners who can stand behind what they report.

H2: Where our experience comes from

Our founders have led large NHS delivery portfolios and run a UK technology services business. They've been responsible for delivery quality, governance and client relationships on major public-sector programmes.

[Button: Talk to us about your programme] → Contact

How we work page

- **SEO title:** How we work | AImpetus
- **Meta description:** Senior-led, partner-friendly delivery. We start small, prove the benefit, then scale what works for public-sector and other organisations.

H1: Senior-led. Evidence-based. Easy to work with.

We keep our approach simple: understand the problem properly, prove the value early and only scale what works. Senior people stay involved throughout.

H2: Our approach

1. **Understand.** We start with your service, your users, your data and the outcome you need. We agree what success looks like and how we'll measure it.
2. **Prove.** We test the idea quickly and safely, against the measures we agreed. You see evidence, not just a demo.

3. **Scale or stop.** We scale what works and stop what doesn't. Then we make sure your team can run and improve it.

H2: What you can expect from us

- **Senior people throughout.** The founders lead every engagement, supported by trusted senior associates.
- **Honest advice.** We'll tell you if something isn't worth doing, or if we're not the right fit.
- **Your standards, not ours.** We work within your security, information governance, accessibility and service standards.
- **Knowledge left behind.** We document, coach and hand over, so you're not dependent on us.
- **Value for money.** We size the team to the job, and nothing more.

H2: Ways to work with us

Option	Best for	How it works
Health check or discovery	Getting an independent view before you commit	A short, fixed-scope piece of work with clear recommendations
Specialist support	Adding senior data, AI or delivery capability to your team	Experienced specialists working inside your team, directly or through a partner
Outcome-based project	Delivering a defined result, such as a pilot or platform	A small team accountable for agreed outcomes

H2: Working alongside your teams

We fit around the people already doing the work: your in-house teams, other suppliers and delivery partners. We bring senior specialists who need little supervision, work to your standards and leave knowledge behind.

[Button: Book a 30-minute conversation] → Contact

About us page

- **SEO title:** About us | AImpetus
- **Meta description:** AImpetus is a UK data, digital and AI services company founded by Prahlad Koti and Deepak Thaper, with 60 years of combined experience.

H1: A new company. A proven team.

AImpetus is a UK data, digital and AI services company. We were founded in 2026 by two people who have spent their careers delivering technology for the NHS and the wider public sector.

H2: Why we started AImpetus

We've seen too many promising data and AI ideas stall before they reached a live service. The technology usually works. What's missing is the groundwork: reliable data, modern platforms, sound governance and steady delivery. AImpetus exists to put that groundwork in place, so AI can do real work in the engine room of public services.

The name says what we're for: AI, and the impetus to move good ideas into everyday use.

H2: Why now

AI has moved from experiment to expectation. But the organisations that gain most won't be the ones with the most technology. They'll be the ones that stay focused on outcomes. That's why we started AImpetus now.

- **Outcomes, not hype.** The real test is benefit delivered: better services, lower costs and measurable impact. Technology is the means, not the goal.
- **Understanding the business matters as much as the technology.** AI and digital tools move fast. Knowing how an organisation really works, its people, pressures and priorities, matters just as much.
- **The groundwork is the gap.** The tools are ready. What often isn't ready is the data, the platforms and the governance underneath. That's exactly where we work.

We both stepped out of conventional IT services to see the work from a different angle: new technology, new ways of delivering services, and the ground reality of making change stick. AImpetus brings that experience together, so the organisations we work with get the benefit, not the hype.

H2: Our founders

Prahlad Koti

Co-founder and Managing Director

Prahlad has spent more than 30 years building and running technology services businesses in the UK. At Mastek he rose from a technical support role to UK Managing Director, having led its Government and Health business and set up its healthcare practice. Along the way he led major public-sector bids, including the pricing and negotiation of a nine-year contract, and grew a FTSE 100 healthcare account threefold in five years.

He went on to become a Partner at Netcompany and Chief Operating Officer at Scrumconnect Consulting, a UK digital company focused on public-sector services. He also advises founders and boards on growth and operational resilience.

At AImpetus, Prahlad leads commercial strategy, partnerships and business development. He holds an MBA from London Business School and a degree in Computer Science.

[Link: Connect with Prahlad on LinkedIn] → https://www.linkedin.com/in/prahlad-koti/

Deepak Thaper

Co-founder and Delivery & Technology Director

Deepak has spent nearly 30 years delivering technology programmes, the last decade and more inside the NHS. At Mastek he led data warehousing and analytics work for NHS Improvement. He then directed NHS England programmes spanning cloud, DevOps and modern data platforms such as Azure Synapse and Palantir Foundry, before becoming Vice President of Delivery for UK Healthcare. His NHS cloud work earned Mastek's CEO Award for Excellence.

More recently he has led delivery and strategy within AI-native organisations and the AI start-up ecosystem, helping organisations move from AI experiments to practical, well-governed adoption.

At AImpetus, Deepak leads delivery, architecture and AI. He holds an MBA, a professional certificate in applied data science and AI/ML from IIT Palakkad, AgilePM Practitioner certification, and certifications in AI security and governance.

[Link: Connect with Deepak on LinkedIn] → https://www.linkedin.com/in/deepak-thaper-80246113/

H2: What we believe

- **Outcomes before technology.** We start with the service and the people who use it.
- **Evidence before scale.** Prove it works, then grow it.
- **Honesty before sales.** We'd rather lose a deal than oversell.
- **Public value.** Every pound of public money should do real work.

[Button: Book a 30-minute conversation] → Contact

Insights page

- **SEO title:** Insights | AImpetus
- **Meta description:** Practical thinking on data, digital and AI in national health and public services, from the AImpetus founders.

H1: Insights

Practical thinking on making data, digital and AI work in public services. No hype, just what we've learned from delivery.

[Link: Follow AImpetus on LinkedIn] → [Placeholder: company LinkedIn page]

First articles to publish (recommended)

Launch with two or three articles, so the page isn't empty. Post each on LinkedIn first, then republish here.

Title	Angle	Author
Why AI pilots stall in public services, and what to fix first	The groundwork problem: data, platforms, governance	Deepak
AI in the engine room: putting AI where the work happens	Explains the brand idea through practical examples	Deepak
What partners need from a specialist supplier	Senior, low-supervision, credible with the client	Prahlad
Five questions to ask before you scale an AI pilot	A practical checklist for senior responsible owners	Deepak
Getting value for money from digital transformation	Sizing teams to the job, proving benefit early	Prahlad

Card format for each article: title, date, author, a two-line summary and [Link: Read more].

Contact page

- **SEO title:** Contact us | AImpetus
- **Meta description:** Book a 30-minute conversation with the AImpetus founders about your data, digital or AI challenge.

H1: Let's talk

Tell us what you're working on. In 30 minutes we'll give you an honest view of where to start, even if that isn't with us. You'll speak directly to one of the founders.

H2: Book a conversation

[Button: Choose a time] → [Placeholder: booking link]

H2: Or send us a message

Form fields (all labelled, with clear error messages):

- Name (required)
- Work email (required)
- Organisation (required)
- I'm a… (dropdown: NHS or public-sector organisation / Partner or supplier / Other)
- How can we help? (required, free text)
- [Button: Send message]

Under the form: We'll use your details only to reply to your enquiry. See our [Link: privacy notice].

Confirmation message: Thanks for getting in touch. One of the founders will reply within two working days.

H2: Other ways to reach us

- Email: contact@aimpetus.ai
- LinkedIn: [Placeholder: company LinkedIn page]
- Based in the UK, working with clients across England.

Placeholders and checks before go-live

Fill in

- [ ] Company number (17574177) and registered office address added to the footer.
- [ ] Company LinkedIn page URL (footer, Insights, Contact)
- [ ] Contact email address: contact@aimpetus.ai (confirmed) – check the mailbox is set up before go-live
- [ ] Booking link, for example Microsoft Bookings or Calendly (Contact)

Legal pages (drafted separately)

- [ ] Fill in the placeholders in the legal pages document (privacy, cookies, accessibility)
- [ ] Add accessibility test results to the accessibility statement
- [ ] Fill in the cookie table once the site is built

Checks

- [ ] UK trade mark search on "AI in the engine room"
- [ ] Both founders read every page once
- [ ] Don't mention Cyber Essentials, frameworks or partners until each is confirmed
- [ ] Test the contact form and booking link end to end
